

EASYFLOW CROSSPIECE

DESCRIPTION

Vasco's EasyFlow air duct system, together with Vasco ventilation, assures a unique low-noise ventilation system. A limited number of parts and a smart logistical concept guarantee easy, worry-free installation. The Vasco EasyFlow air ducts are made of durable HDPE. Mounting can be done quickly, easily and flexibly.

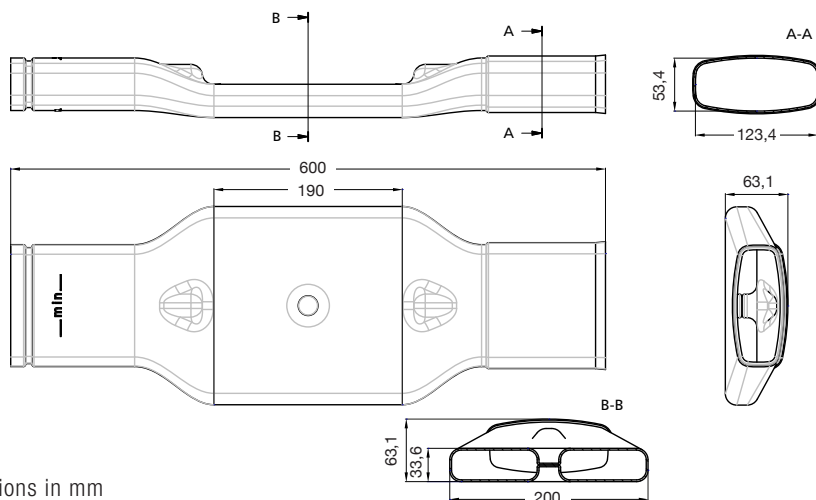

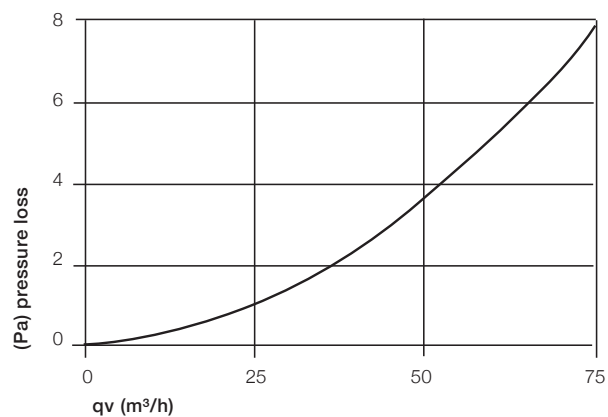

Where two ventilation ducts cross one another they become less high, but also wider, so that the internal surface area remains the same and the optimal functioning of the ventilation system continues to be guaranteed, without pressure increase or disturbing noise. The crosspieces are delivered in sets of 2 pieces, but each individual piece can also be used separately, e.g. in order to get around obstacles and so on. Each crosspiece is equipped with a rubber gasket.

- 1 set per package
- Material: HDPE (High Density Polyethylene)
- Airtightness class according to NEN-EN 1507 & NEN-EN 12237: D
