

# EASYFLOW DOUBLE VALVE CONNECTOR

## DESCRIPTION

The Vasco air duct system EasyFlow, together with Vasco ventilation, assures a unique low-noise ventilation system. A limited number of parts and a smart logistical concept guarantee easy, worry-free installation. The Vasco EasyFlow air ducts are made of durable HDPE. Mounting can be done quickly, easily and flexibly.

The double valve connector makes it possible to limit the pressure loss in the air duct pathway wherever necessary, by connecting 2 parallel EasyFlow air ducts to 1 single air valve. In this way longer distances can be bridged over, the number of valves in larger spaces can be limited, etc. The double valve connector is equipped with a rubber gasket at both air duct connections.

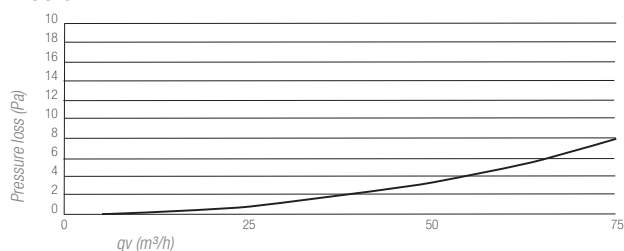

- Packaged by individual piece
- Material: HDPE (High Density Polyethylene)
- Airtightness class in accordance with NEN-EN 1507 & NEN-EN 12237: D

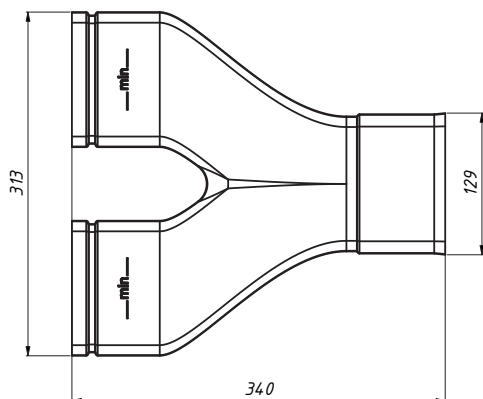

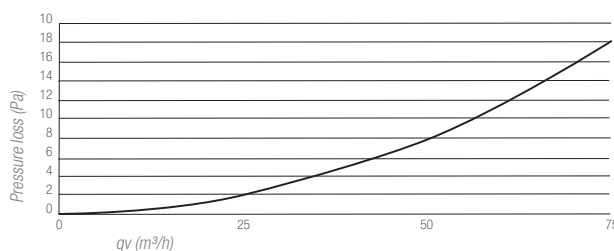

## TECHNICAL DATA

### Pressure losses through double valve connector

#### Supply air

#### Exhaust air
