

Easy Flow® straight valve connector

Description

The Vasco air duct system Easy Flow®, together with Vasco ventilation, assures a unique lownoise ventilation system. A limited number of parts and a smart logistical concept guarantee easy, worry-free installation. The Vasco Easy Flow® air ducts are made of durable HDPE. Mounting can be done quickly, easily and flexibly.

You can connect a supply or exhaust valve of Ø 125 mm to the straight valve connector. The valve connector is equipped with a rubber gasket.

- Comes in a package of 2 or 5 pieces
- Material: HDPE (High Density Polyethylene)
- Includes 1 mounting bracket / straight valve connector
- Airtightness class in accordance with NEN-EN 1507 & NEN-EN 12237: D

Pressure losses through straight valve connector

Dimensions in mm

Fixation Easy Flow® with mounting bracket

It is recommended to fix the Vasco Easy Flow® air ducts and accessories by means of the supplied mounting brackets. The fixation of this mounting bracket to the surface can be done in different ways.

Traditional fixation by pressure nail or plug and screw

To apply the Vasco pressure nails or standard plugs and screws, a hole must first be drilled of Ø 6mm. After this you can fix the mounting bracket by pushing the pressure nail into the provided hole or inserting a plug and screwing the mounting bracket.

Alternative fixation by gas nailer

The PULSA® 27, from SPIT Paslode, offers a quick and easy way to fix mounting brackets to the substrate. This by using the steel and concrete nails of 22 or 27mm in combination with a rondel and the specific magnetic rondel holder, which can also be used on a wooden surface.

Key features and benefits:

- Lighter and more compact: the lightest and most compact device on the market
- Ergonomic: lightweight, versatile and more agile in tight spaces or awkward positions and overhead applications
- More-capacity battery: up to 10,000 shots per charge (magazine capacity of 30 nails)
- Fast and cost-effective: up to 8x faster than traditional anchoring
- Health and safety: virtually dust-free work with less vibration
- No delay: high-quality, reliable and proven technology for more than 35 years
