

GATEWAY

DESCRIPTION

The gateway ensures communication between the Vasco Climate Control App and Vasco devices/regulations. These include the ventilation units (except for the D150 Compact and Energy plus: not compatible), underfloor heating controlled via the zone controller as well as hydraulic radiators using the RF radiator thermostat.

- wired connection with modem via UPT cable
- powered by external source (1x230V+N) via included micro USB cable
- wireless RF communication (radio frequency signal: 868.3 MHz)
- dimensions LxWxH: 105x81x28 mm
- housing: plastic (ABS-PC)
- wall surface mounting (screw fastening)

TECHNICAL DATA

Symbol	Function	Description
	Power	Indicates whether or not the gateway is powered.
	LAN connection	Indicates whether or not the gateway is connected to a LAN network.
	RF communication	Indicates whether or not the gateway is connected with the ventilation unit.

Error codes + LED feedback:

Problem with RF communication	LED RF communication blinks red
