

Combi grid

Description

Vasco insulated air ducts and accessories, together with the other Vasco ventilation products, provide a unique low-noise ventilation system. The insulated components have been developed to meet the increasingly stringent thermal insulation and noise level requirements for ventilation systems with heat recovery. These insulated components should be applied at the external connection of the ventilation system.

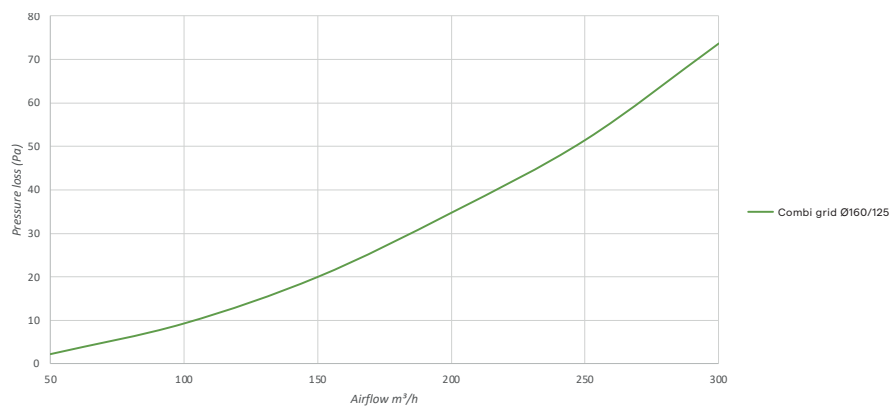

The Vasco combi grid is a combined wall outlet solution for fresh supply air and polluted exhaust air. It can be used for all external connections with inner diameter Ø 125mm for both horizontal and vertical mounting.
