

DESCRIPTION

The purpose of these mounting supports is to enable Vasco ventilation units type DX4/5/6 to be set up freestanding.

There are 2 variants and both have adjustable feet. The mounting support for horizontal installation has also been developed so that the correct angle of inclination is always respected for correct condensation drainage.

The mounting support for vertical installation can, if desired, be attached to the ventilation unit by means of M6 bolts (to be provided by the customer).

The mounting support is delivered as one package (4 individual frames) and has to be assembled by the customer (bolts, nuts and feet).
